

Dashboard — Credit-Card Default Risk Taiwan (2005) vs Macro

Catatan & filter interaktif (di Tableau/Power BI):

- Filter: dimensi demografi · indikator makro · rentang bulan
- Tableau -> sumber ETL (bigdata_etl); Power BI -> ELT (bigdata_elt)
- Korelasi default↔makro = 0 karena label default bersifat per-klien (konstan tiap bulan) — keterbatasan grain, lihat report §10.
- Sumber angka: report.pdf §6.3 + FRED EXTAUS (kurs nyata Apr-Sep 2005).
